

## **Connection Device of Windshield Wiper of Motor Vehicle**

### **Abstract of the Disclosure**

5       An automotive windshield wiper connection device has a body which is provided with a hook-type elastic piece, an insertion-type elastic piece, a pin hole, and a locking slot. The hook-type elastic piece is provided thereover with a rotary cover pivoted therewith for engaging a hook-type rocking arm. The insertion elastic piece is provided thereover with an insertion hole for engaging an insertion-type rocking arm. The connection device is thus compatible with the windshield wiper rocking arms of motor vehicles of various models.
